Continuation of 5. Applicant argues that the Vallancourt patent fails to disclose a quantizer for quantizing the feedback signal to the input/summing circuit. However, as pointed out in the last Office action, sample and hold circuits such as that of the Vallancourt are generally used in conjunction with A/D converter, see col.2, lines 19-25, which requires quantizing the sampled signal. The present application also admits to such quantization of the feedback signal as prior art at page 2. Thus, in the case that the sample and hold circuit of the Vallancourt patent is used for A/D converting, the quantization of the feedback signal is required.
